

Common Seated Heights

If you're unable to measure your seated height, but want to continue your research, you can use one of these "common" seated heights below.

52" or less -Common for children or adults with a standing height less than 5 feet 5 inches

52"-54"-Common for people with a standing height between 5 ft and 5 feet 5 inches

55"-57" -Common people with a standing height taller than 5 feet 5 inches but less than 6 feet

58"+ Common for people with a standing height taller than 6 feet

A doorway height of 56" or taller is considered an "extra tall" doorway.

These "common seated heights" are a generality and meant to assist those doing research without being able to measure their seated height. For accuracy, have your exact seated height on file before purchasing an accessible vehicle
